

- 9-day old 250-ton Liebherr Crane
- Never used before
- \$4 million price tag
- Failure of back propping beneath the 200mm thick concrete deck
- Crane support outrigger punches through slab causing crane to lose balance and collapse across the site and onto adjoining property
- Crane balanced in the air for approximately 1 hour before entire rig and boom collapse completely across site and rigs falls through to the basement level.
- Amazing that no one was seriously injured or killed.
