

Taking on the world's toughest energy challenges.TM

The Outlook for Energy: A View to 2030

**Todd W. Onderdonk
Corporate Planning**

**STI/SPFA Spring Pressure
Vessel Conference**

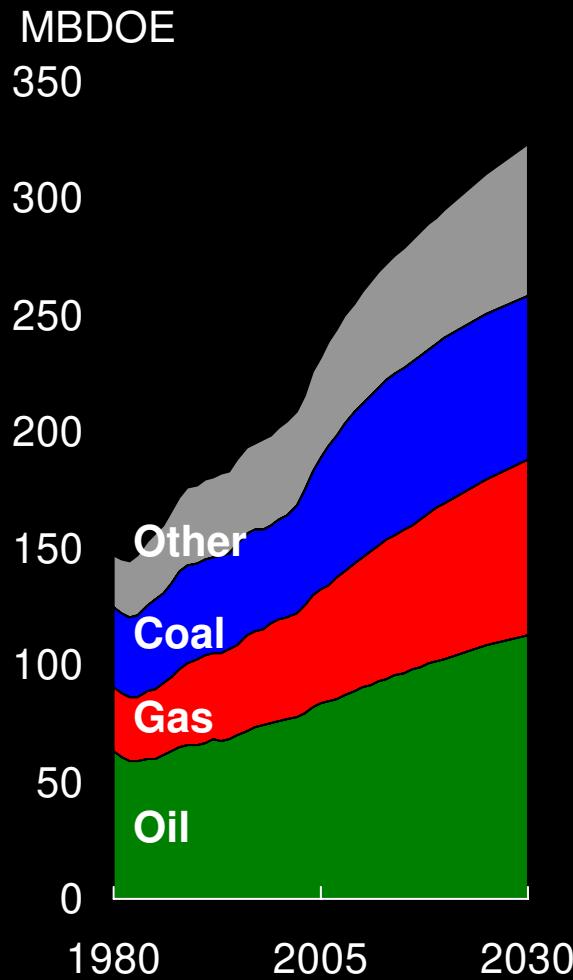

May 15, 2008

This presentation includes forward-looking statements. Actual future conditions (including economic conditions, energy demand, and energy supply) could differ materially due to changes in technology, the development of new supply sources, political events, demographic changes, and other factors discussed herein (and in Item 1 of ExxonMobil's latest report on Form 10-K). This material is not to be reproduced without the permission of Exxon Mobil Corporation.

2007 Energy Outlook Basis

Energy Supply/Demand

- ***Energy Demand Outlook***

- Detailed buildup by country and end-use sector
- Links energy use to economic drivers
- Incorporates efficiency improvements
- Considers trends, economics, and supply by fuel type
- Reflects assessment of potential policy initiatives

- ***Oil & Gas Supply Outlook***

- Incorporates ultimate recoverable resource estimates
- Models production profiles for all countries or regions
- Considers economics and ongoing advances in technology

Sensitivities

- Double biofuels growth through cellulosic ethanol
- Double rate of improvement of new car efficiency
- Replace ½ of coal growth with nuclear / CCS

Global CO₂ Emissions

Energy Related CO₂ Emissions

Sensitivities

- Double biofuels growth through cellulosic ethanol
- Double rate of improvement of new car efficiency
- Replace ½ of coal growth with nuclear / CCS
- Retire coal plants at 40 years and replace with nuclear / CCS

Conclusions

- *Economic progress, especially in developing countries, will drive global energy demand higher despite substantial efficiency gains*
- *Oil, natural gas and coal are indispensable to meeting this energy demand, even with rapid growth in renewables*
- *Significantly impacting CO₂ emissions requires global participation, step changes in energy efficiency, technology gains and massive investment*
